

▶ ▶ RÖHM “Clamping PLUS”

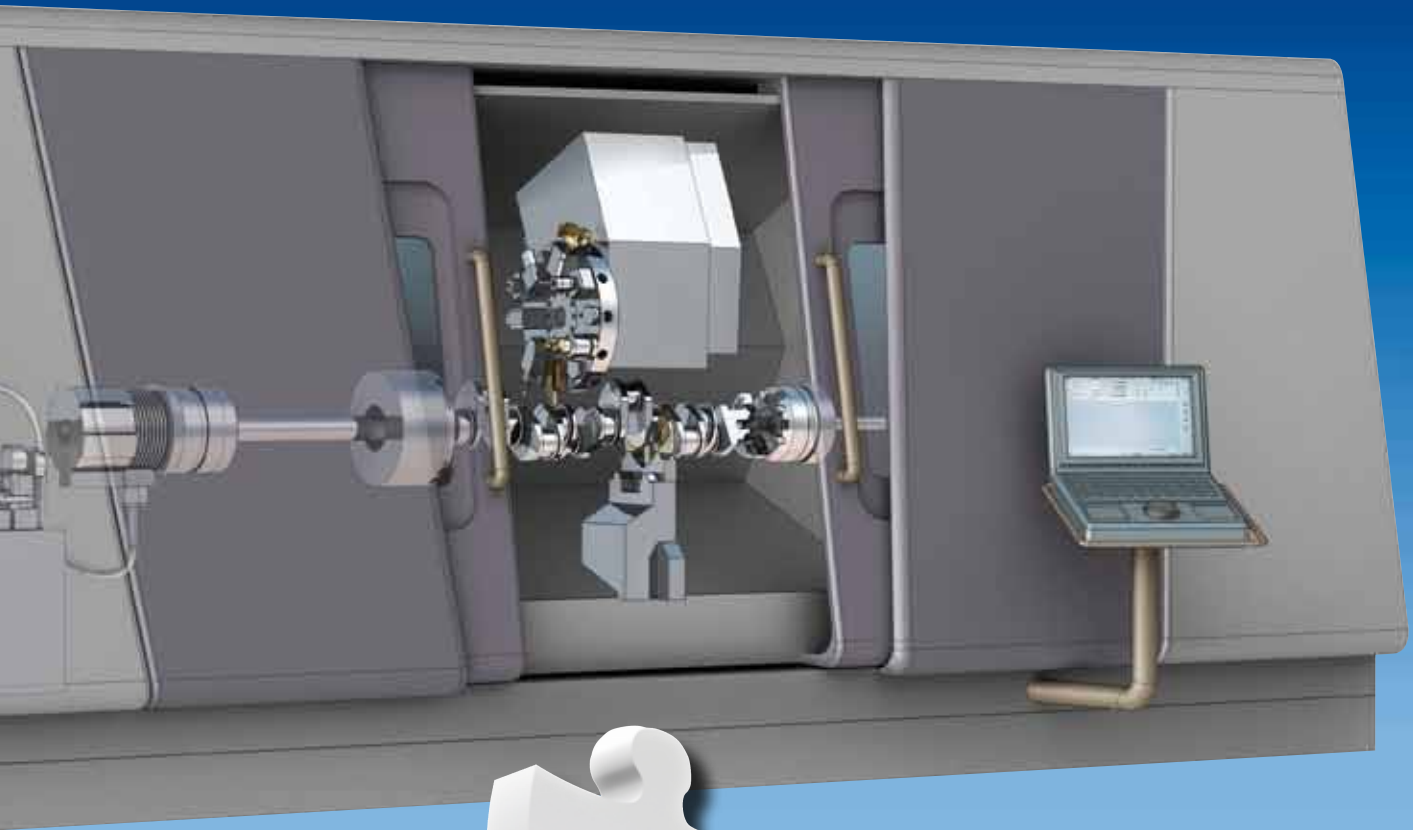

Unused capacities increase the proportion of fixed costs for products. Nowadays, it is even more important to make optimum use of existing potential. We do not leave you alone with this big challenge; we always stay by your side as a professional partner.

Producing and industrial companies face global competition due to time and pricing pressure. In order to safely position our own services, it is necessary to form a service package which combines process know-how with a modern well-equipped machinery park.

In order to make full use of the available machines with the variety of accruing work pieces, the clamping tools used should be adapted to suit the customer's requirements and therefore accommodate the consequential reduction of fitting and processing times together with flexible production options.

- *Optimisation of applications + processes*
- *Checking and retrofitting machines*
- *Preventative maintenance*

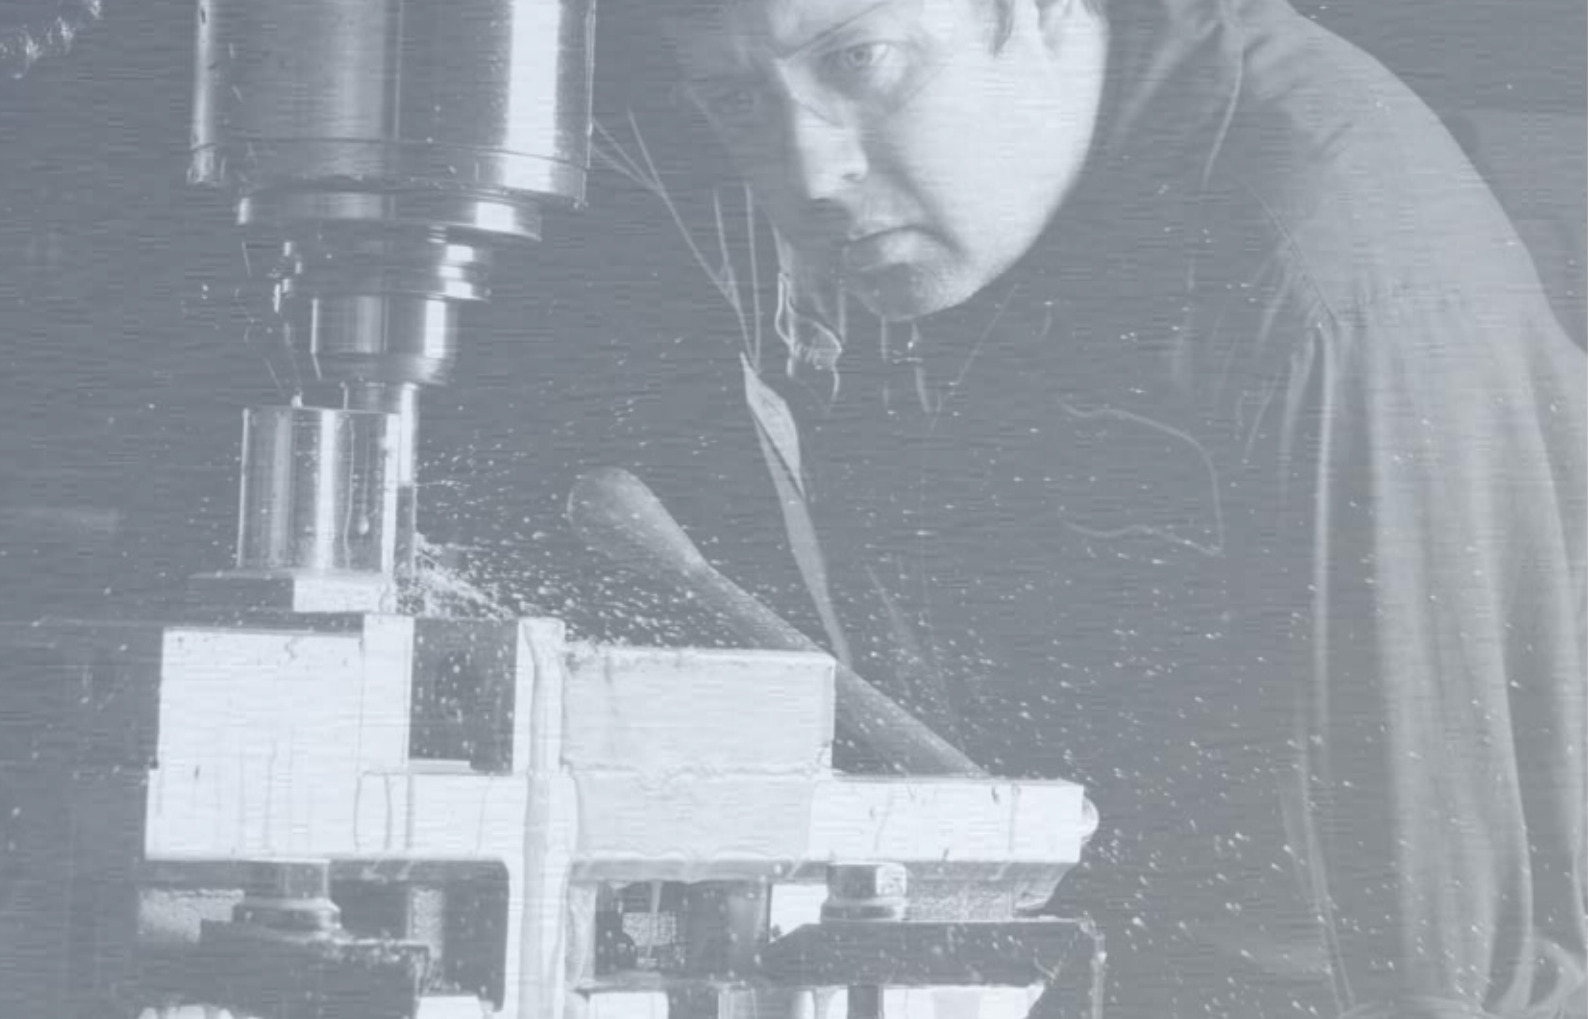

"We close the gap"

Reducing lot sizes, increasing parts diversity and ever-shortening delivery times are characteristic of the current situation in industrial producing companies. A significant improvement of efficiency can often be achieved simply by retrofitting existing machines.

If you are interested in “Clamping Plus”, please do not hesitate to contact us. Our specialists carry out analysis on your premises and work on an optimisation concept with which you can use the existing machines and capacities more efficiently.
